EDUCATION

University of Bristol

Sep 2022 – Jun 2025

BSc Computer Science, First Class Honours

EXPERIENCE

Software Engineer Intern

Jun 2025 – Present

Dassault Systèmes

- Designed and implemented new features from user requirements, including drafting technical specifications, development, testing, and validation.
- Developed and executed test cases to verify functionality and ensure post-implementation stability.
- Identified issues in existing applications, collaborated with quality engineers to verify root causes, and delivered fixes for both internally and externally reported issues.
- Coordinated with international teams to align development efforts and maintain consistent product quality.

Research Assistant

Jul 2024 – Sep 2024

Hanyang University

- Developed a VR first-person shooter using advanced motion hardware, contributing to research on enhancing immersion and reducing cybersickness through vibrotactile feedback.
- Contributed to experiment design, participant testing, and statistical analysis to evaluate user experience.
- Co-authored paper “Do Vibrotactile-Rendered Virtual Walking Sensations Reduce VR Cybersickness,” accepted for publication at the 2025 IEEE International Symposium on Mixed and Augmented Reality (ISMAR’25).

Co-creator (Ca-Pow! Project)

Oct 2023 – Mar 2024

Royal Academy of Engineering

- Facilitated workshops supporting intersectionally disadvantaged students, collaborating with peers to tailor content that addressed specific barriers in higher education.
- Led sessions for mentors to foster an inclusive university environment, explaining concepts like intersectionality and microaggressions to strengthen their ability to support students from diverse backgrounds.

UX Research Assistant

Jul 2023 – Sep 2023

Global Research

- Evaluated UI/UX through usability testing, interviews, and benchmarking against industry products to identify issues and enhance user experience.
- Processed and visualised user and test data to support data-driven decision-making in product development.
- Researched AI applications to assess their potential for enhancing product usability and anticipating future development trends.

PROJECTS

Bridging the Gap: Comparing Geometric Path Planning Between GPT-4o and Classical Algorithms in Indoor Navigation

- Built an experimental pipeline to compare GPT-4o’s spatial reasoning with classical A* path planning using 2D floorplans and Oriented Bounding Box (OBB) data.
- Evaluated zero-shot and few-shot prompting for geometric reasoning, introducing metrics to assess path validity, collision rate, and deviation from optimal paths.

Haunted Escape

- Winner – GameJam 2024 (Best Visuals)** · Awarded for outstanding visual design and creativity.
- Developed 15 suspenseful, progressively challenging stages within a haunted setting, engaging players as they navigated dynamic traps and ghostly encounters in an escape-themed game.

Therago – AI-Assisted Mental Wellbeing WebApp

- Developed an emotion-tracking web app with chat-based UI and voice-to-text input, integrating Cohere API for real-time sentiment analysis and personalised support.

TECHNICAL SKILLS

Languages: Python, C++, Java, C#, Go, JavaScript, HTML/CSS

Frameworks/Tools: AWS, React, Unity, Git, Microsoft Office
